

Abstract

Device for avoiding or limiting the tilting of the head.

A description is given of a device for avoiding or limiting the tilting of the head forwards and/or to the side of a passenger sitting in a seat which has a backrest, having at least one one-piece or multi-piece head-support element which comprises one or more cushion-like elements (1a, 1b; 11a, 11b). The head-tilting protection described is distinguished by the fact that the one or more cushion-like elements are designed and dimensioned such that, in the position worn as intended, they are able to completely surround the side and front sections of the neck and/or of the head of the passenger, resting on the shoulders and/or the chest region of the passenger.
